

STK JOINERY

A LIST OF STAIR PARTS AND TIMBER TYPES

Timbers	
	Pine Is the least expensive material and is often used when painting your staircase.
	Hemlock Is basically pine without knots but also a little stronger, often used when varnishing or polishing to a lighter finish.
	Sapele Sapele is very strong and durable, often used when a darker finish is required.
	Ash Is also very strong and durable, often used when a lighter finish is required. It has a fairly similar grain to oak and often used as a cheaper substitute.
	Oak (American white oak) is many peoples favourite timber. Strong and durable.

Please Note: timber colours will vary due to natural colouring

Spindles

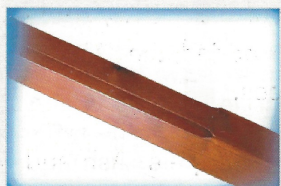

Stop Ovolo

We produce a range of spindles that will compliment every staircase, whether it be a modern or a traditional design.

If you do not find what you're looking for in our range, you may have a design of your own or an existing pattern to be matched, we can copy this for you from a photograph, drawing or your old spindle.

Twist

Chamfered

The spindles are available in 4 different thicknesses (32mm, 35mm, 41mm and 50mm square) although you will notice that there is more choice the thicker the spindle size. This is because some of the patterns are so intricate that only the larger size are strong enough.

Spindles come in 2 different lengths (900mm & 1100mm). The 900mm long spindles are used for the staircase and the 1100mm long spindles are used for the landing sections.

Provincial

Fluted

All our products are available in 5 different timbers. PINE, HEMLOCK, SAPELE, ASH & OAK.

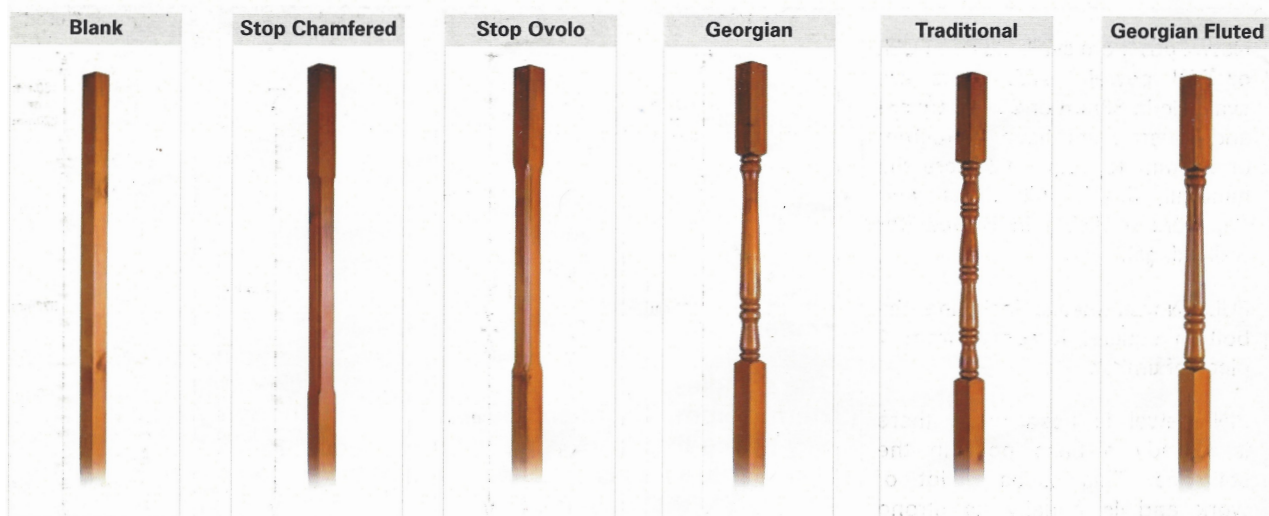

Design your own

Remember:- If you do not find a design within our standard range that you like... **Design your own**

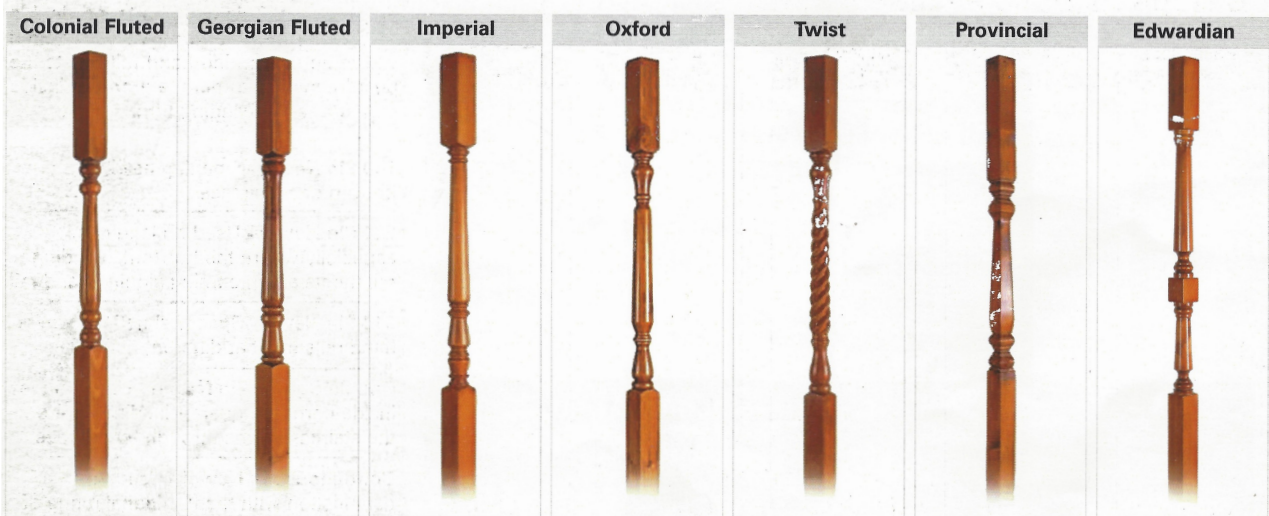

32mm² Spindles (900mm or 1100mm)

35mm² Spindles (900mm or 1100mm)

41mm² Spindles (900mm or 1100mm)

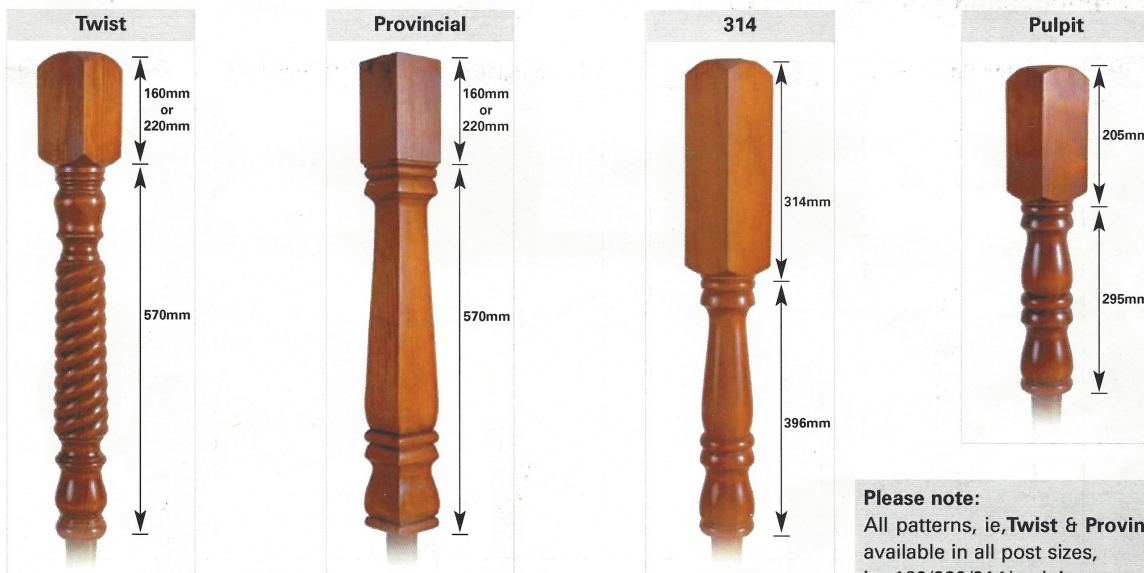

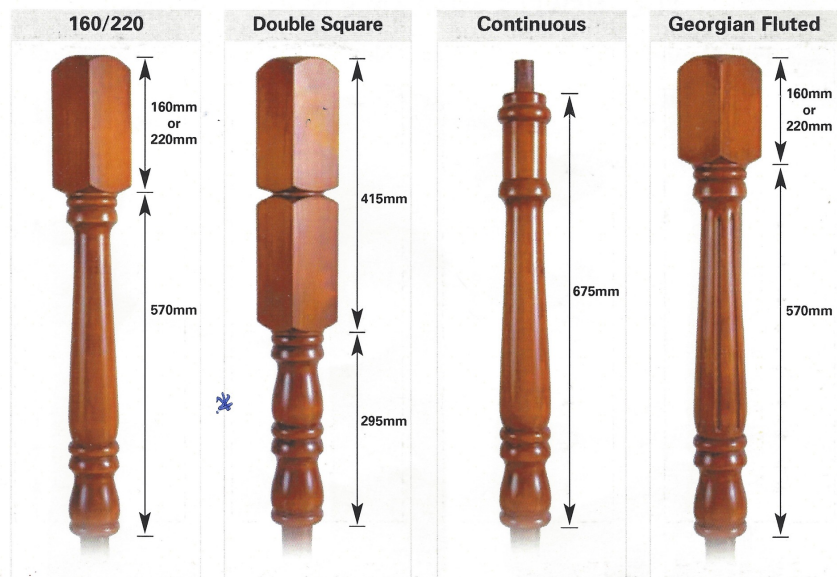

90mm Pin Newel (Also Available in halves)

Newel posts are available as a **FULL** or **PIN** newel. ALL posts are available in 83mm or 90mm square and most posts have a 160mm or 220mm top square (where the handrail fixes). All Posts and Caps are available in Halves (for wall fixings).

FULL Newel means including the bottom square. It comes from 1 piece of timber.

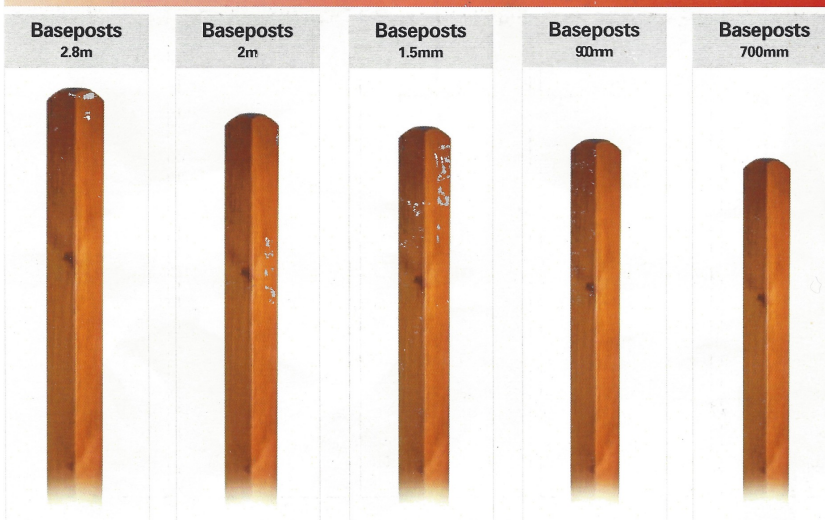

PIN Newel is used when there is already a base post in the staircase. This saves a lot of work and is equally as strong once fixed.

Please note:

All patterns, ie, **Twist** & **Provincial** etc are available in all post sizes, ie: 160/220/314/ pulpit etc.

Baseposts (Also available in halves)

Pulpit Newel This is a shortened double square pin newel and might be required where an up coming hand rail meets the post below the turning, e.g on the inside corner of a 90° winding turn.

160 Pin Newel - Opening newel at the bottom of a staircase

220 Pin Newel - Used on landings, especially where the horizontal landing rail meets an up coming sloping hand rail

314 Pin Newel - Special situations where hand rails meet at different heights

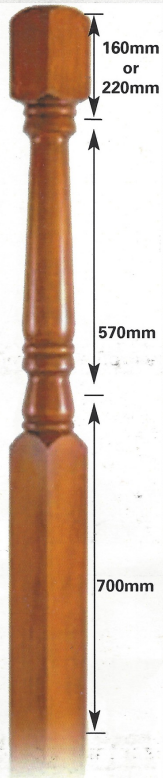

Double Square Pin Newel - Used on the inside corner of quarter landing where the staircase turns through 90 degrees

Continuous Pin Newel - Used in conjunction with the traditional range of continuous rail fittings

90mm Full Newels (Also available in halves)
